

June 8th, 2020

BiomimX S.r.l. and Neuro-Zone S.r.l. entered into a commercial collaboration agreement

BiomimX Ltd. is an innovative startup, incubated in Bio4Dreams, focused on the development of predictive in vitro functional assays to evaluate drug efficacy and toxicity. The proprietary technology, named uBeat™, allows the generation of beating organs-on-chip by coupling 3D cell cultures with controlled mechanical stimulation.

uKnee and uHeart are currently available applications of this technology, an osteoarthritic human knee model and a beating human heart model, respectively.

Neuro-Zone Ltd. is a cell-based service company, part of Bio4Dreams network, supporting drug discovery, drug repurposing and research projects in the fields of inflammation and age-related pathologies.

Under this commercial agreement, Neuro-Zone will provide BiomimX with the access to its commercial network for business development support purposes, in addition to new opportunities alerting and marketing activities.

Furthermore, Neuro-Zone will add uKnee to its commercial portfolio of preclinical models for musculoskeletal inflammatory diseases. Through BiomimX's proprietary technology, Neuro-Zone will offer a new solution suitable to reduce risks in the development of osteoarthritis related drugs and medical devices.
